SPECIAL PARTS

CLICK TO VIEW VIDEO

This innovative color-coded design is engineered to quickly identify the right tools and frame parts for the job at hand.

PRACTICAL BOXES

ORGANIZED TRAYS

PERFECT PLIERS

DEDICATED DRIVERS

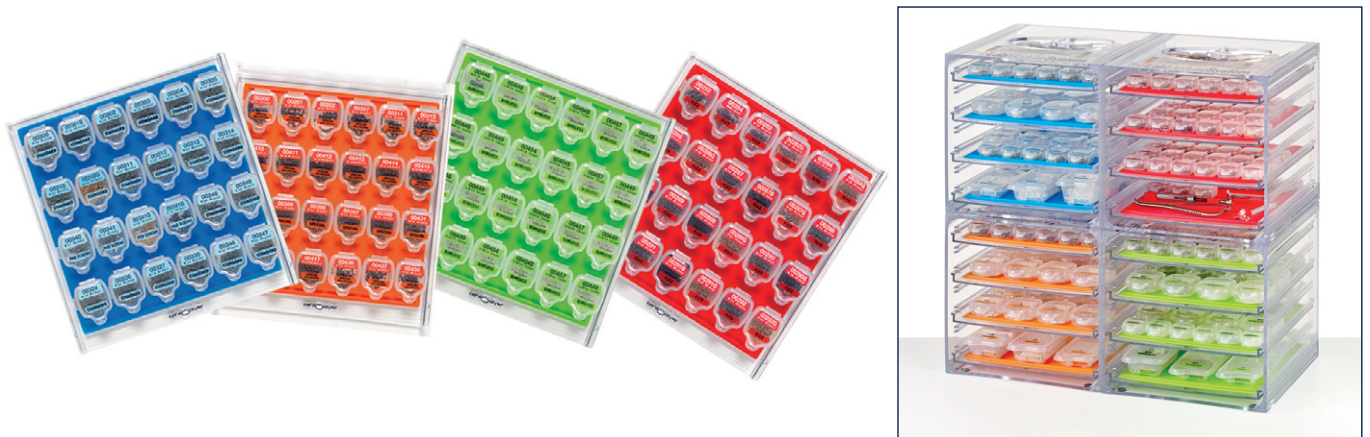

0.2 The Lab Modular System

So many advantages!

1 TIME SAVING FOR A QUICK REPAIR The colour guides you to the right tool

2 ORDER AND FUNCTIONALITY = TIME SAVING = SPACE SAVING Components can be easily identified by the colour of their trays

3 MODULARITY AND FLEXIBILITY IN YOUR LAB Consumables and tools can be placed in dedicated cubes

4 PRACTICAL BOXES AND TRAYS

Everything is organized on trays and in resealable boxes of various dimensions

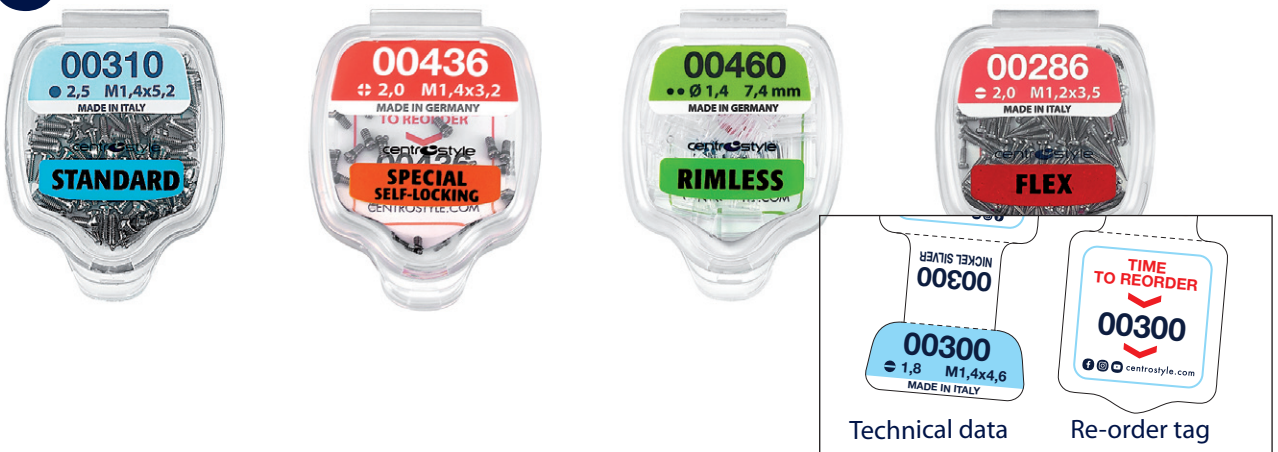

5 EVERYTHING AT HAND

Joining the boxes by arrangement

6 EASY PRODUCT IDENTIFICATION AND REORDER

Each colour identifies a specific use, the reference number facilitates reordering

0.3 The Lab Modular System

Choose the perfect kit for your lab

Starter Kit

An essential selection of the most popular tools and supplies to fit out any lab or workshop. Includes 1 organizational cube, 4 trays of assorted frame parts, 8-piece plier set with stands, complete screw and nut driver sets, pack of AR markers and an array of silicone working aids.

KIT REF. 01674S

Professional Kit

An expanded selection of the Starter Kit. Includes 2 organizational cubes, 9 trays of assorted frame parts, plus 1 tray with spring hinge tool kit, 15-piece plier set with stands, complete screw and nut driver sets, third-hand, pack of AR markers and an array of silicone working aids.

KIT REF. 01674P

Craftsman Kit

A comprehensive selection of tools and supplies for labs who handle the most complex and varied frame repairs or adjustments. Includes 4 organizational cubes, 19 trays fully stocked with frame parts, plus 1 tray with spring hinge tool kit, 26-piece plier set with stands, complete screw and nut driver sets, third-hand, portable clavulus, pack of AR markers and an array of silicone working aids.

KIT REF. 01674C

These kits are three proposals made according to the experience of Centro Style

The **LabModularSystem** can be composed according to the needs and requirements of the optician or laboratory in accordance with the types of frames and processes.

0.4 CUBES AND TRAYS

Cubes: Ideal Organization of your Lab

You can display the cubes on the table, stack them or hang them on the wall.
Each cube is suitable for 7 trays

HINGES

Centro Style hinges are produced with numerically controlled machining processes to ensure the correct measurements in the manufacture of the joints and the threads.

Materials

The hinges are made of two different materials, nickel silver and titanium, to guarantee different performances according to the resistance and method of application:

- **Nickel silver:** material commonly used for the production of hinges, ideal for welding.
- **Titanium:** hypoallergenic technological material used for minimal hinges with a very high resistance, ideal for metal frames.

Types and characteristics

Our hinges are divided into three main families:

- **Hidden hinges:** in nickel silver, ideal for plastic frames and for flex mechanisms
- **Pinned hinges:** in nickel silver, ideal for plastic frames and for classic systems
- **Solder hinges:** in nickel silver or titanium, ideal for metal frames and for classic systems

The three types of hinges are available in a wide range of models, different from each other in terms of size, shape, joints, profiles and packaging. They are Made in Europe or in Italy.

Packaging

The hinges are supplied in a modular container, which allows you to join together multiple boxes, each with an integrated lid to facilitate the organization of the lab and for a quick search for the component.

The re-order tag facilitates reordering without possibility of error and the bar code allows inventory control.

Hidden and Pinned hinges in nickel silver for plastic frames:

- **The hidden hinges** used for plastic frames are shaped with a part called an "anchor" to join to the front or to the temple of the frame.

How to apply: the hinge embedding unit is the ideal tool to insert the hidden hinges and to replace the damaged ones.

- **The pinned hinges** have two holes to insert the fixing pins.

How to apply: a special tool called "Clavulus" is the ideal tool to remove the broken hinges and to insert the new ones. The nickel silver pins firmly secure the hinge.

Hinges for metal frames: in nickel silver or titanium, to be welded

- **Solder hinges** are made of nickel silver or titanium. They are available for right or left fronts and for temples.

How to apply: the hinges are welded on the end-piece or on the temples.

The welding machine melts the soldering material to join the hinge with the end-piece or the temple.

SCREWS

Centro Style's screws are machined by lathe to guarantee correct measurement of the threaded part, with superior quality compared to budget screws that are stamped and do not have the same precision for correct pairing between the male and female thread.

Material

The screws are available in two materials : stainless steel and nickel silver to use for different applications.

- **Stainless steel**, a very resistant and hard material used for screws to guarantee a safer frame closure.
- **Nickel silver**, a softer material than stainless steel which is used for temple screws and areas where there is no excessive force in the closure system.

Typology and features

The screws present specific features based on the different types of frame: there are screws specified for frames with flex hinges, in both metal and plastic frames and for rimless.

The range is completed with screws for a specific use, for repair and for the R.B. components with both metric and American thread.

They are made in Europe or in Italy.

Packaging

The screws are supplied in a modular container that allows you to join multiple boxes together.

Supplied with an integrated cover on which is printed use information to enable easier organization in the lab and quick checking of components. The re-order label inside the box facilitates ordering the product without the possibility of error whilst the bar code allows inventory control.

Nickel silver and Stainless steel screws for both metal and plastic frames

Wide range of nickel silver screws with specific characteristics are used for the assembling of temples, nose pads and eyewires where there is no closure phase.

Stainless Steel for flex screws

The screws for hinges and flex temples are made in stainless steel and have a conical point to make it easier to assemble flex hinges by aligning the screw holes at the joint. For this reason they are also known as aligned screws. The conical point, when inserted into the hinges can then be easily removed.

Made in Italy.

Screw for Metal Frames

This wide range of screws includes different types for a specific use related to work on frames : screws for closing the eyewire, screws for nose pads and temples.

Each type is designed for the differing materials, dimensions and for specific details.

Screw for Plastic frames

Contrary to metal frames, plastic frames only require a single type of screw – the ones that are necessary to assemble the temples.

The circle of the lens is fixed and does not require a screw to open or close it like a metal frame and does not require screws for nose pads as the frame fits directly onto the nose. If necessary one can apply adhesive nose pads.

Screws for Rimless Frames

This family of screws is ideal for rimless frames and for different lens thickness.

They are characterized by much longer lengths, completely threaded.

Available in both stainless steel and nickel silver, with different shapes of head to enhance rimless frames with aesthetic detail.

The majority of these screws are supplied with the corresponding nuts for rimless frames. The screws are made in Italy.

Special Screws for reparations

Special Screws for repairs.

This family of screws comes entirely threaded with or without Teflon to be used for special repairs characterized by the conical points at the end of the screws.

Special screws for Centro Style Frames

The family of screws and nuts with specific characteristics for use with Centro Style frames.

Special Screws for R.B. Components

Family of screws with metric thread with specific features for use with R.B. Components.

RIMLESS

Centro Style rimless spare parts are specifically designed to help the optician with the assembly and the repair of rimless frames.

Our wide offering includes many spare parts for all the differing kinds of assembly of rimless frames (with screws or with plastic pins).

Packaging: The products are supplied in a modular container, which allows you to join together multiple boxes with an integrated lid to facilitate the organization of the lab and for a quickly searching for the component.

The re-order tag facilitates reordering without possibility of error and the bar code allows inventory control.

SPARE PARTS FOR RIMLESS ASSEMBLY WITH SCREW

• Screws with nuts

Wide range of screws ideal for rimless frames and for any lens thickness. These screws are longer than the standard ones and with continuous thread. They are available both in nickel silver and stainless steel, with different head shapes to give some aesthetic detail to the rimless frames. Made in Italy and are Reach compliant.

• Washers, bushes, screw caps and nuts

The metal washers and nuts are produced by lathe machining to ensure the correct measurements especially of the metric pitch of the nuts supplying a higher quality than molded products.

The bushes and the plastic washers are produced from high-quality moulds to maintain the thickness of the sections and ensure effectiveness of use.

Bushes and washers act as bearings between the frames parts used in the rimless assembly to reduce friction, facilitate tightening and avoid contact of the metal parts with the lenses.

The screw caps are made of soft transparent silicone and provide cover to the prominent part of the screw.

SPARE PARTS FOR RIMLESS ASSEMBLY WITH PLASTIC PINS

The plastic pins and metal bridges (in steel or titanium) are produced with high-quality moulds to grant precision and effectiveness of use.

• Plastic pins

They are made of plastic material of different hardness: Soft, Medium Soft, Medium Hard and Hard.

The ease of assembly and the resistance in the use of the frame by the end user make them different from each other. The choice of the material depends on the lens type and on the optician's experience in assembly.

Plastic pins are single or double, with or without hollows.

Three kinds of pins are available:

• **Double sleeves:** they are the classic ones normally used by frame companies and offer a pleasant aesthetic appearance for the frame.

• **Hollow double sleeves:** they are new generation pins to allow an easy assembly also of very thin lenses or positive lenses with low thicknesses on the sides. Moreover thanks to the hollows it is possible to cut the prominent part of the metal pin after assembling the rimless frame.

• **Single sleeves:** they are used for special assemblies or when it is not possible to use double sleeves due to a different interaxis.

They are Made in Europe, made in Korea and are Reach compliant.

• Bridges

They are available in two sizes (30 and 32 mm) to offer the best fitting and they are available in two different materials:

• **Steel:** very resistant and hard material, it is mainly used for standard rimless frames. Suitable for assembly both with screws and with plastic pins. A wide range of colours with shiny finishing are available.

• **Titanium:** ultralight material suitable for sensitive and delicate skin. Assembly with plastic double sleeves. The special self-locking shape of the two laser-welded pins guarantees their tightness during use. Reach compliant.

NOSE PADS

The wide range of Centro Style nose pads is characterized by a variety of materials and sizes to meet all consumer needs based on:

- Sensitivity of the skin and type of use that identifies the best performing material
- Size / weight of the glasses to better define the size of the area that will distribute the weight on the nose, avoiding any discomfort and redness.

Safe and certified materials: No phthalates, No nickel, No cadmium, Non toxic, REACH certified 100% biocompatible silicone, respecting the environment.

THE MOST REQUESTED FAMILIES OF NOSE PADS

SILICONE Nose Pads

- High wearing comfort, since the soft anti-slip silicone with which they are made guarantees the correct maintenance of the optical centre of the frame, while the transparent polycarbonate insert maintains shape retention.
- Soft and hypoallergenic material: reduces the redness of the more sensitive skin and distributes the weight of the glasses better on the nose, ideal for those suffering from allergies or skin redness.

The range of silicone nose pads consists of the following families:

- **Classic**, with 2.0 mm thickness, screw and pressure connection
- **Slim Line**, 1.5 mm thickness, screw and pressure connection, ultra-thin and almost invisible.
- **"High consumption"**, screw, pressure and hook attachment, ideal for meeting the high consumption requirements of laboratories, with a correct quantity / price ratio.

BIOMEDICAL PVC Nose pads

- Good wearing comfort, and maintenance of the correct optical centre of the frame, thanks to the semi-soft and non-slip material. Especially appreciated because they remain less "sticky" than silicone and do not undergo colour changes due to sweating.
- Hypoallergenic material: The outer body is made of hypoallergenic transparent PVC with rounded edges, ideal for allergy sufferers, while the internal insert guarantees its shape retention.
Made in Italy and Germany.

These models are divided into two families:

- With transparent insert, screw and pressure connection
- With metal insert, screw and pressure connection

"Airpad" Silicone Nose Pads with air cushion - Screw, Pressure and System 3 attachment

- Very high comfort, thanks to the air cushion inside which, like a valve, adjusts itself allowing a greater distribution of the weight of the glasses on the nose.
- Hypoallergenic material: The thin elastic body is made of hypoallergenic silicone, ideal for allergy sufferers, and non-slip, ensuring that the correct optical centre of the frame is maintained.
Made in Germany.

Nose pads for rimless frames in titanium and steel, with special hook attachment

- For all fittings and skin needs: Nose pads made of different materials and sizes to meet all the needs of consumers who prefer to wear rimless frames: from classic soft silicone, semi-soft PVC to resistant polycarbonate.
- The special attachment allows the application of the nose pad by dragging or grafting it onto the hook.

Silicone and Sponge Adhesive Nose pads

- Ideal for plastic frames, they are made of soft transparent non-slip silicone, adhesive and sponge, with different thicknesses and sizes to meet all the comfort needs of consumers.
- Ideal solution also to reduce any bridge calibres ensuring the fit and the maintenance of the correct optical centre of the frame.

THE FAMILIES OF SPECIAL NOSE PADS

The range is completed by the following families of special nose pads, to meet all the customer's fitting needs based on the type of frame, skin sensitivity and weight of the glasses.

1.5 NOSE PADS

Easy Navigation Concept

The nose pads are packaged in a box that presents a specific colour based on the material

The Lab Modular System

BLUE colour for:

- SILICONE
- AIRPAD
- BIOFEEL
- SLIM LINE

The Lab Modular System

GREEN colour for:

- BIOMEDICAL PVC

The Lab Modular System

ORANGE colour for:

SPECIAL MATERIAL:

- TITANIUM
- POLYCARBONATE
- TPE
- GLASS

SPECIAL FIXING:

- SYSTEM 3
- TITANIUM AND STAINLESS STEEL
- PRIMADONNA
- VARIOUS

CREATE YOUR ASSORTMENT AND USE THE TRAYS WITH THE LAB MODULAR SYSTEM CUBES TO KEEP BOXES ALWAYS AT HAND

Materials

Wide range of material to satisfy the needs of the consumer based on the sensitivity of the skin and the use of the frames

SILICONE

- Soft
- Clear
- No-slip
- Hypoallergenic
- Non-toxic
- Flexible
- Nickel- and cadmium-free
- Phthalate free
- 100% biocompatible

BIOMEDICAL PVC

- Clear
- Phthalate free
- Rounded edges
- Does not turn yellow
- Hypoallergenic

TPE (thermoplastic elastomer)

- Suitable for those who fear allergies wearing frames, because TPE is not porous like silicone and absorbs fewer substances potentially allergenic on the skin.
- TPE differs from silicone because it is less transparent and non-adhesive.

GLASS

- Hypoallergenic
- 100% biocompatible
- Very long-lasting, virtually unbreakable
- Easy to clean, nonabsorbent
- Hygienic
- Eco-friendly

POLYCARBONATE

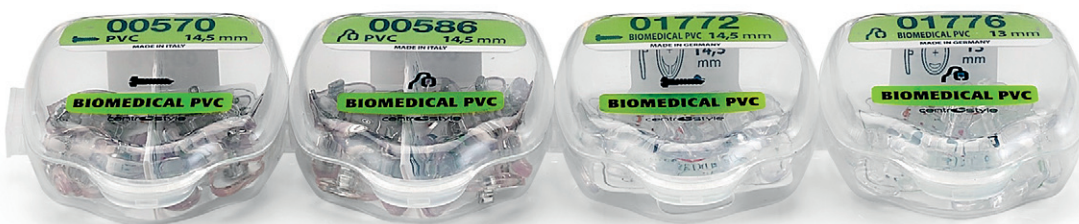

- Crystal clear
- Phthalate free
- 100% biocompatible
- Long-lasting
- Ideal for sensitive skin (mainly for elderly people)
- Rounded edges
- Lightweight
- Does not turn yellow

TITANIUM

- Hypoallergenic
- Long-lasting
- Ideal for sensitive skin (mainly for elderly people)

The boxes: ideal for time and space saving

- On the cover of the box is printed the use of the nose pads in order to make it easier for the organization of the lab and to easily search for the components.
- The label included in the box is ideal for the reorder of the products avoiding the possibility of mistake.
- Bar code helps the management of stock.
- With partition cardboard for left and right asymmetrical nose pads.

BOX 20 pcs. - Ergonomic joinable boxes

BOX 100 pcs. - Ergonomic stackable boxes

TEMPLE TIPS & TEMPLES

Centro Style offers only quality products, used by the best manufacturers of frames. A complete range of temple tips and temples of many sizes, shapes and materials to:

- satisfy every need of replacement and repair for the end user in terms of sensitivity of the skin, the type of use of the glasses and the size / weight of the glasses
- identify the most suitable performance solution to distribute the weight of the glasses by reducing any discomfort and redness and to ensure the correct position on the face for greater visual well-being and comfort.

TEMPLE TIPS

The temple tips are made of silicone or acetate, materials that ensure good comfort and are ideal for those suffering from allergies or skin redness.

The non-slip silicone ensures a better grip and adherence of the glasses to the face, while the acetate maintains the colour over time without undergoing the colour variations typical of silicone.

The wide variety of internal diameters makes them suitable for all kinds of temples: from titanium to steel and metal temples.

The range is completed by the cable ends and the frame locks, both ideal for maintaining the correct optical center and retaining the glasses on the face during light sporting activities or games and the temple tip covers that offer higher protection to those suffering from allergies or skin redness.

Reach compliant.

Packaging

They are supplied in an ergonomic modular stackable box, with a lid on which the size of the internal diameter is printed in order to facilitate the organization of the laboratory and a quick search of the spare parts, while the label placed inside is designed to reorder the products without making an error. The barcode facilitates inventory management.

TEMPLES

The temples differ from each other and have specific features according to the kind of glasses to which they have to be assembled:

- temples with different joints to be assembled to the different hinges in the frames,
- temples for rimless frames complete with end-piece and therefore ready to be assembled on the lens.

They are made of different materials (stainless steel, nickel silver, titanium and acetate) with or without flex hinges to guarantee different performances for all kinds of frames.

The materials with which they are made:

- **Stainless steel**, very resistant and used for rimless frames with thickness lower than the nickel silver.
- **Nickel silver**: slightly softer than steel, used for larger temples and especially for flex mechanisms.
- **Titanium**: hypoallergenic technological material used for minimal frames with a very high resistance and lightness, ideal for rimless frames.
- **Acetate**: traditional material made from sheets with nickel silver core for simple and long-lasting adjustment.

Reach compliant.
